NASK system was rewarded by Wprost news magazine

Botsense – innovative system to detect infections and activity of malicious software on computers of e-banking users, developed by NASK specialists, was rewarded by Wprost news magazine.

The award is intended to honor the best services and companies from financial sector. During the ceremonial gala the award was handed out to prof. Ewa Niewiadomska-Szynkiewicz, deputy director and research director at NASK.

The aim of the award is to promote new and most interesting financial products and services. Participants can be both banks as well as brokerage firms, consulting companies and institutions offering services for banking sector. NASK has been honored for developing and implementing a state-of-the-art security system warning a bank in real time that its client has been infected by malware or there are attempts to introduce changes in the code of the page. BotSense acts as a part of web infrastructure.
