ISDN telecommunications

ISDN telecommunications service is a classic telecommunications service, i.e. a digital telecommunications link with 30 communication channels (B) and one signalling channel (D)

Service description:

The ISDN telecommunications service is a classic telecommunications service, i.e. a digital telecommunications link with 30 communication channels (B) and one signalling channel (D), each of 64 Kbps bandwidth.

Range of the service:

The most important functions available within subscription of the service:

- Customer Panel access
- direct dial-in (DDI) up to 200 numbers,
- call waiting (CW),
- call hold (HOLD),
- caller line identification presentation (CLIP),
- calling line identification restriction (CLIR),
- anonymous call restriction (ACR),
- forwarding calls:
 - call forwarding unconditional (CFU),
 - call forwarding busy (CUB),
 - call forwarding no reply (CFNR)
 - three-party calls

Benefits of the service:

The service is connected to the digital centre infrastructure owned by the Customer. Additionally, Customers acquire the access to the NASK Customer Panel that is a web page and at the same time an element of the billing system. The Panel allows to access the information on failed calls up to the recently ended reference period.
